

Energy equity in the drive for Net Zero

Professor Stefan Bouzarovski
Manchester Urban Institute
School of Environment, Education and Development

@stefanbuzar

Inclusive urban decarbonisation

- **Energy efficiency:** Improving the energy performance of the residential stock
- **Equity:** Fuel poor households are crucial for the success of the low-carbon transition
- **Engagement:** Putting people first, ensuring that communities are mobilised and trust is developed

- Improving energy efficiency and thermal comfort via a Living Lab approach, more than 300 households so far
- Engagement of intermediaries and energy advice to deliver interventions
- Focus on the social capacities, relations and emotional well-being of participants
- Skills for access to resources and building 'flexibility capital'
